

FELIX IVANDER

Software Engineer | Backend & Full-Stack Development

Jakarta Timur, Indonesia | 081902612828 | ifelixivander@gmail.com | [LinkedIn](#)

SUMMARY

Final-year Informatics Engineering student at Universitas Multimedia Nusantara (GPA 3.86/4.00, expected graduation 2026) with professional experience building full-stack business applications in Laravel. Comfortable across the stack — backend REST APIs, React/Next.js frontends, and Flutter mobile — with a growing focus on Python and FastAPI for backend engineering. Undergraduate research experience applying XGBoost and SHAP to clinical mortality prediction.

SKILLS

- Languages:** Python, PHP, JavaScript/TypeScript, Java, Dart, HTML/CSS
- Backend:** FastAPI, Laravel, REST API Development, Node.js fundamentals
- Frontend & Mobile:** React, Next.js, Inertia.js, Flutter
- Databases:** PostgreSQL, MySQL, SQLite, Firebase
- DevOps & Tools:** Docker, Git/GitHub, Nginx, Ubuntu VPS, Postman, Linux
- Machine Learning:** XGBoost, Random Forest, SHAP, LLM Integration, Model Evaluation

EXPERIENCE

Fullstack Engineer Intern Feb 2025 – Jun 2025
PT Sannin Kreasi Indonesia | Tangerang

- Built and maintained full-stack business applications — a Warehouse Management System (WMS) and a Datalog Measuring System — using Laravel and Inertia.js
- Developed REST API endpoints and backend/frontend features aligned to business requirements
- Performed database-related development, debugging, and maintenance on existing applications
- Collaborated with the development team using Git for version control

Informatics Laboratory Assistant Feb 2024 – Feb 2025
Universitas Multimedia Nusantara | South Tangerang

- Supported the Web Development course (PHP, Laravel) across mono-language and bi-language class sections over a 1-year term
- Assisted students with web development concepts, troubleshoot programming issues, and explained technical concepts to learners with varying skill levels

Website Coordinator Feb 2024 – Feb 2025
UMN Festival | South Tangerang

- Coordinated development and ongoing maintenance of the organizing committee's website with a cross-functional team

ACADEMIC RESEARCH

Undergraduate Thesis — Mortality Prediction in Cancer Patients with Sepsis (MIMIC-IV)

- Applied XGBoost and Random Forest to predict 28-day mortality, using SHAP for explainable model interpretation
- Experimented with LLM-based explanation and evaluation pipelines for clinical narrative generation

CERTIFICATIONS

Flutter Developer Path — Dicoding Indonesia Jul 2025 – Nov 2025

- Intensive program covering Flutter, Dart, software development fundamentals, SOLID principles, and basic ML integration

EDUCATION

B.S. Informatics Engineering Expected 2026
Universitas Multimedia Nusantara | South Tangerang — GPA: 3.86 / 4.00

Relevant coursework: Web Programming, Object-Oriented Programming, Database Systems, Artificial Intelligence, Machine Learning, Expert Systems, Cloud Computing & Cybersecurity, Secure Coding Fundamentals

LANGUAGES

Bahasa Indonesia — Native | English — Very Good Command
